

ABSTRACT OF THE DISCLOSURE

A displaying apparatus comprising a signal generator part generating a video signal, and a display part displaying thereon a picture based on the video signal generated by the signal generator part, further comprising a setting part including a portion set part for setting whether to indicate an arbitrary portion within a screen of the display part, and a size adjuster part adjusting the size of the set portion based on movement from an arbitrary position within the portion set by the portion set part to another position; and a controller part for storing a position value of the set portion set by the setting part, generating a setting signal corresponding to the set portion based on the position value, and processing the video signal according to the setting signal. With this configuration, the user can make a selection allowing an emphasized portion to be shown within a screen of the display part, and can select the size, the position, and the brightness of the emphasized portion.
